

THERMAFUSION™ FACIAL MASK DUAL - SIDED

FACIAL TREATMENT PROTOCOL

Treatment: This heat-infusing mask uses patented Lava Gel® mineral energy technology to enhance the power and speed to efficacy of your facial treatments, ensuring optimal self-hydration with up to 10x product penetration to soften fine lines and relax your client. Use of the dual-sided mask offers a moist application and dry occlude mask. For use in-room or remote locations. Activates in 2 minutes with warm water.

Benefits: Self-heating mineral energy stimulates the skin's natural processes of hydration, vasodilation, and drives molecular acceleration of your chosen skin care products.

Products and Tools Needed: 1 ThermoFusion Facial Mask, skin appropriate cleanser, massage cream or oil, serums and/or mask, eye cream, moisturizer and SPF.

Duration: 60 minutes

STEP ONE

Cleanse skin with appropriate cleanser for client's skin type.

STEP TWO

Perform scrub, enzymatic exfoliation, microdermabrasion, or other modality for skin renewal.

Optional

Extractions for skin, as needed.

STEP THREE

Massage face for 10-15 minutes using skin appropriate facial cream or oil.

STEP FOUR

Activate ThermoFusion Facial Mask following directions on packaging. Allow 2-3 minutes for activation.

STEP FIVE

Using cleanser, remove residual facial massage cream/oil.

STEP SIX

Apply skin appropriate mask and/or specialty serums.

Pro Tip

Utilize active serums for hydration, anti-aging, pigmentation, etc. that will benefit most from penetration into the skin during the ThermoFusion mask treatment.

therma*bliss*[®]

For best results, layer serums followed by a cream-based mask over top.

STEP SEVEN

Carefully remove ThermaFusion Facial mask from pouch. Unfold mask and lay directly on the face with the fabric (dark) side facing down. This application keeps the product on the skin moist.

STEP EIGHT

Apply massage oil or cream to client's shoulders, neck and décolletage. Perform massage on these areas to further relax client as the warm, moist mask application is processing.

STEP NINE

After 10-15 minutes, gently lift the mask off the face and flip the mask over, placing it smooth (white) side facing down. Cover with a hand towel to help infuse heat during the treatment. By reversing the mask, this will allow the heat to continue as a dry occlude mask, without the steaming/moist effect. This will ensure ultimate product penetration. Leave on for 5 minutes and complete massage to the client's shoulders, neck and décolletage.

STEP TEN

Gently remove ThermaFusion Facial mask and discard, or place under client's neck.

STEP ELEVEN

Using a hot towel or facial pads, remove skin topical(s) from face.

STEP TWELVE

Complete facial by applying skin appropriate treatment serums, eye cream, moisturizer, and SPF. Client will feel renewed and radiant, glowing skin will be revealed.

ThermaFusion Facial Mask can be used once weekly for best results.

HEAT MANAGEMENT

- Prior to application, test temperature of ThermaFusion Facial Mask on your forearm.
- Inform client that you are placing the warm mask on their face.
- Never press down with pressure on the mask while it is laying on the face.
- Advise client to inform you immediately if the mask is uncomfortable or too warm. Pay special attention to the delicate eye area and upper cheeks, where the mask tends to feel the warmest.
- Remove immediately if mask feels too warm.

CONTRAINDICATIONS

ThermaFusion Facial Mask should not be used in the presence of open cuts, wounds, inflammatory skin conditions, neoplasms (growths), or peripheral vascular disease where circulation is impaired.
